

PETROBRAS

Santos Basin Pre-Salt vs. Campos Basin

Santos Basin Pre Salt in Comparison with Campos Basin

- Considering the 6 already conceded blocks (28%), they represent 150% of Campos Basin total area

The map displays the Santos and Campos Basins in Brazil, highlighting oil fields, reservoirs, and exploration blocks. The legend indicates:

- Drilled Wells (Black dots)
- Pre-Salt Reservoirs (Dark gray areas)
- Fields (Light gray areas)
- Exploration Blocks (Dashed lines)

The map also shows state boundaries (RJ, SP, PR, SC), major cities (Rio de Janeiro, São Paulo, Florianópolis), and the Atlantic Ocean (Oceano Atlântico). An inset map shows the location of the study area within Brazil and the USA.

Enhancing Reserves

Santos Pre-Salt volumes have more than doubled the existing Brazilian reserves: considering recoverable capacity already announced + transfer of rights compensation

* SPE Criteria
